

QWH35 Wall Mount Electronic Sounder: Advanced Pre-recorded Warning Sounds for Industrial Safety

The QWH35 Wall Mount Electronic Sounder is a modern safety siren sounder designed for demanding industrial environments. One of its standout features is the integration of 31 pre-recorded special warning sounds, including customisable voice alerts (QWH35SD MP3) stored on an SD card (MP3 format). This allows for precise and clear communication including tailored voice instructions over loud speaker specific to factory conditions, enhancing worker awareness and required evacuation response during emergencies.

Operating at a maximum audible level of 115dB, the QWH35 ensures alerts are heard across noisy factory floors. The volume and sound selection switches are conveniently located inside the unit, enabling easy adjustments without interrupting operations. Users can select from the 31 built-in sounds or upload up to 30 custom MP3 audio files via the SD card, to provide a versatile range of warning sounds and voice messages.

Constructed with a tightly sealed PC+ABS housing, the QWH35 boasts an IP66 protection rating, making it dustproof and weatherproof. This durability suits both indoor and outdoor installations, even under harsh conditions such as heavy rain or dust storms. The device operates reliably within a wide ambient temperature range from between -30°C to +50°C standard, with specialized models functioning as low as -50°C, making it suitable for extreme environments.

The QWH35 supports both binary and bit input modes (SD card type only), facilitating seamless integration with existing safety systems. Lightweight and compact, it runs on DC12V-24V or AC110V-220V power supplies, providing flexible deployment.

For factories prioritising clear, customisable, and reliable safety alarms, the QWH35 Wall Mount Electronic Sounder offers an unmatched combination of advanced audio features, together with rugged durability, to greatly enhance workplace safety and operational efficiency.
